

# The Progress Company Platform & Product Availability Guide

Last updated: **November 1<sup>st</sup>, 2006**

Previous version: **October 6<sup>th</sup>, 2006**

The Platform & Product Availability Guide reflects the current commercial releases for the Progress Company's products. This document does NOT address future product release plans. The information contained in this document is updated on a regular basis and is subject to change without notice.

## Update Summary

- **Progress Version 9.1E LifeCycle Status has been changed from 'Functionally Stable' to 'Mature'. For information regarding the Progress product LifeCycle process please refer to the following on-line documentation or contact your local Progress sales representative. [http://www.progress.com/progress\\_software/products/docs/lifecycle.pdf](http://www.progress.com/progress_software/products/docs/lifecycle.pdf)**

### **Mature Phase Summary:**

*Mature Phase* products do not receive new features and support services are limited. You can continue to deploy existing applications built on *Mature Phase* products however, Progress strongly recommends that customers use newer versions to build next-generation products. *Mature Phase* products will NOT be evaluated for certifications on new operating environments.

Due to the advanced age of *Mature Phase* products, not all support services are available. With the knowledge and skills available, Progress Technical Support will provide commercially reasonable efforts to resolve customer issues and answer customer questions on *Mature Phase* products covered under Standard or Extended 24/7 Support. However, the knowledge and skills required to resolve issues on *Mature Phase* products is *NOT guaranteed*. Progress strongly recommends that customers migrate to fully-supported Progress products as soon as possible in order to maintain the highest level of support for their applications and systems.

## General Product and Platform notes and information

### Platform Notes:

- Registered products of the UNIX® 98 Open Group are supported by <http://www.opengroup.org/>. Membership details at <http://www.opengroup.org/openbrand/register>
- HP-UX 11i (11.1) OS Patch PHSS\_24638 recommended for Progress ServicePack and Fathom installations
- Neither the Internet SCSI (iSCSI) nor the Common Internet File System (CIFS) protocols are currently supported by Progress Software products.
- Software support policy for Windows Tablet XP 2005. The Microsoft Windows XP Tablet 2005 operating system is a superset of the Windows XP Professional operating system; applications that are compatible with Windows XP Professional also run on Windows XP Tablet 2005 Edition. Progress Software does not guarantee support for Windows Tablet XP 2005 features that are not part of the Windows XP Professional operating system and any issues found with these Tablet XP features relating to Progress Software products, will need to be proven against the Windows XP Professional operating system before contacting Progress technical support. For more details on Windows Tablet XP 2005 features, support and compatibility please refer to the following on-line Microsoft documentation: <http://support.microsoft.com/default.aspx?scid=kb:en-us:327160>
- Progress and OpenEdge 32 Bit Products are supported on operating systems that can either sustain 32 Bit or 64 Bit kernel modes. The following table defines the support of Progress and OpenEdge products for the Microsoft Windows and Linux Intel based operating systems in relationship to hardware support:

Platform		Progress / OpenEdge version - CPU type - Media ID		
Operating System (Edition / Distribution)	Hardware CPU Type	Certified and Supported Optimized for the target platform	Notes	Comments
<b>Microsoft Windows 32 Bit Intel</b> XP Professional Server 2003 & Server 2000 Tablet XP NT 4.0 <sup>(2)</sup>	32 Bit CPU	Progress V9.1E 32 Bit Media-ID 146 OpenEdge V10.0 32 Bit Media-ID 146 OpenEdge V10.1 32 Bit Media-ID 146		Native operating system and hardware support
	64 Bit CPU	Progress V9.1E 32 Bit Media-ID 146 OpenEdge V10.0 32 Bit Media-ID 146 OpenEdge V10.1 32 Bit Media-ID 146	(1) (1) (1)	Supported but not optimized for 64Bit hardware
<b>Microsoft Windows 64 Bit Intel</b> XP Professional Server 2003	64 Bit CPU	Progress V9.1E 32 Bit Media-ID 146 OpenEdge V10.0 32 Bit Media-ID 146 OpenEdge V10.1 32 Bit Media-ID 146	(3) (4)	Supported but not optimized for 64Bit operating system or hardware
<b>Linux 32Bit Intel x86</b> Red Hat Enterprise Linux 3.0 & 4.0 Novell SuSE Enterprise Linux 8 & 9	32 Bit CPU	Progress V9.1E 32 Bit Media-ID 178 OpenEdge V10.0 32 Bit Media-ID 178 OpenEdge V10.1 32 Bit Media-ID 178		Native operating system and hardware support

<b>Table Key: NOTES</b>				
(1) Supported but not optimized	Dependant on the platform vendor(s) guarantee to support 32 Bit executables. Memory usage (e.g. RDBMS buffer pool & client processes) limited to 32 Bit addressing			
(2) NT 4.0	Windows NT 4.0 support is for Progress V9.1E only - OpenEdge 10 is not certified against NT 4.0			
(3) Progress V9.1E 32 Bit	Requires JVM 1.4 – (JVM 1.3 is not supported for the Microsoft Win64 platform)			
(4) Fathom Management 3.0A	The combination of Progress V9.1E with Windows 64 and a 1.4.1 JVM runtime environment will cause the Fathom Management 3.0A installation to fail			

## General Product and Platform notes and information (continued)

### Platform Notes:

- VMware support.

VMware is a third-party software product that provides a hypervisor environment that enables multiple Intel operating systems (for example, Windows® and Linux®) to execute concurrently on the same physical (Intel®/x86 based) machine. VMware itself is transparent to the "guest" operating systems and the applications or middleware which operate above those operating systems. Progress Software does not specify support for the VMware product because VMware itself provides transparency to the operating systems, applications, and middleware that operate above it to which we do support.

Progress V9.1E and associated Fathom products have been evaluated against the following VMware (MS Windows) editions and there are no known issues associated with virtualization:

- VMware GSX Server 3.1
- VMware Workstation 5
- VMware ESX Server 2.5

- SCO OpenServer 6 certification and support:

SQL RDBMS support is not available until the OpenEdge 10.0B04 and Progress V9.1E03 Service Packs.

SCO OpenServer 6 certification is dependant on the platforms ability to natively support UnixWare 7.1.x applications. OpenEdge 10 support for OpenServer 6 is achieved via the UnixWare 7.1.4 OpenEdge product offering (Media ID 191). For more details regarding UnixWare and OpenServer 6 compatibility please refer to the following URL: [http://www.sco.com/products/openserver6/single\\_cert.html](http://www.sco.com/products/openserver6/single_cert.html)

**Product Notes:**

- OpenEdge Studio 2.1.0 includes version 9 Progress ProVision Plus and Progress Dynamics V2.1
- Progress V9.1E is the last major Progress release to support SQL89 access. Customers should migrate to the SQL92 access products.
- LifeCycle Status: Fathom products follow the same Progress Software LifeCycle rules as the Progress products.  
On the release of a new maintenance version the existing edition will retired after two months (9.1D → 9.1E).  
On the release of a new enhancement version the existing edition will retired after nine months (9.0 → 9.1).  
More details on LifeCycle policies can be found at the following URL: <http://www.progress.com/products/lifecycle/index.ssp>
- **OpenEdge DataServer for Oracle: Oracle patch 10.1.0.4 is recommended for 10g installations.**

**Third Party Product Notes:**

- CorVu products are deployed to non-Windows operating systems using customized ABA Servers supplied by CorVu.
- Version V9.1C of Tugboat Software’s Roundtable TSMS® product is the only edition to support Progress Dynamics (all versions)
- Business Objects ODBC connectivity matrix:

## General Product and Platform notes and information

### Linux Notes:

- The Linux Operating System supports the following hardware platforms (as of May 2005):
  - Intel x86 (32bit)
  - AMD64 (64Bit)
  - Intel EM64T (64Bit)
  - Itanium Processor Family (64Bit)
  - IBM POWER (former IBM iSeries and IBM pSeries systems) (64Bit)
  - IBM zSeries (64Bit)
  - IBM S/390 (31Bit)

Progress and OpenEdge products currently support the Linux Intel x86 (32Bit) platform

The future OpenEdge 10.1A release will provide support for the Linux AMD64 and Linux EM64T platforms.

Support for other Linux platforms, such as Linux POWER is being considered for future OpenEdge 10 releases.

To support the seven different Linux platforms, there are an indeterminate number of Linux distributions in the market. Customers have consistently asked for stability, better performance, and reliability of the Linux platform as well as enterprise-class support. Progress Software cannot be effective in servicing customers if we attempt to support a large number of different Linux distributions. It is our intent is to support a selected set of distributions that have long lifecycles and that are well supported by the distributors and their partners. The primary Linux distributions to be supported are those from Red Hat and Novell SUSE (Enterprise editions only).

- Support of the Network File System (NFS) protocol version 3 (NFSv3) under the Linux Intel x86 platform for Progress products, in particular the support of RDBMS files (physical and recovery) on a NFS partition, requires updates and features found within the 2.4.21 Linux Kernel and key Progress Service Packs
- Network File System (NFS) protocol versions NFSv2 and NFSv4 under Linux have not been certified and are therefore unsupported.
- ProBuild: The ProBuild utility should be executed on the 'Minimum OS Level'; the resultant custom binaries can be deployed to any of the supported OS levels. For instance ProBuild is not supported on Red Hat EL 3.0 – Customers should use ProBuild under Red Hat EL AS 2.1 and then deploy to Red Hat EL 3.0 or Novell SuSE Enterprise.
- The combination of Red Hat (3.0 & 4.0 editions) with JVM 1.3.1 may cause 'java.lang.OutOfMemoryError' when running any of the unified brokers (i.e. the Application Server). Java thread dependencies of Red Hat 3.0 and above requires a JVM level of at least 1.4.1. Progress V9.1E is built against Java 1.3.1 but can be deployed to execute under a runtime JVM 1.4.1 environment - the only exception is the Progress V9.1E JDBC drivers. Possible workarounds are:
  - 1) Set the 'LD\_ASSUME\_KERNEL=2.4.19' environment variable
  - 2) Upgrade to JVM 1.4.1 BUT be warned the V9.1E JDBC Drivers will not function under JVM 1.4
  - 3) Upgrade to OpenEdge 10

**Progress Version 8 Platform Notes:**

- (1) Refer to the Progress Product Life Cycle document for life cycle definitions.
- (2) If the DataServer is available on the platform, vendor supplied networking (i.e. SQLNET) is supported.
- (3) Unless otherwise noted, all clients support Progress networking for DataServers.
- (4) Version 8 UNIX platforms are character only.
- (5) Roundtable 8.3C and higher will only be available on CD-ROM media.
- (6) Windows XP is for client and development products. Microsoft does not provide server versions of Windows XP (it is for single processor systems).
